## [Php Serial Port Communication Linux Operating](#)

```
deviceSet("0"); $serial->confBaudRate(9600); //Baud rate: 9600 $serial->confParity("none"); //Parity (this is the "N" in "8-N-1")
$serial->confCharacterLength(8); //Character length (this is the "8" in "8-N-1") $serial->confStopBits(1); //Stop bits (this is the "1" in "8-N-1")
$serial->confFlowControl("none"); //Device does not support flow control of any kind, so set it to none. //Now we "open" the serial port so we can write to it
$serial->deviceOpen(); $serial->sendMessage("*1" ); //sleep(1); // echo "hi"; $serial->deviceClose(); ?>
```
